

Welcome to the technology leader!

⊙ High precision thermoregulation

We are the technology leader for high precision thermoregulation in research and industry. Our products ensure precise temperature control in laboratories, pilot plants and production processes. The product range offers solutions for all thermoregulation tasks from -125 to +425°C.

⊙ Eco-friendly refrigeration

20 years ago, we have started the ongoing conversion to eco-friendly refrigerants. Nowadays we offer a large part of our product range with environmentally friendly refrigerants as standard. Therefore we are a pioneer in the field of ecological and sustainable temperature control.

⊙ Product overview

High precision thermoregulation solutions for applications in the laboratory, technical centre and production.

⊗ Compatible Control & KISS

Classic bath and circulation thermostats with an open bath for internal and external thermoregulation tasks

⊗ Minichiller & Unichiller

Chillers for economic and environmentally-friendly cooling in the laboratory and industry

⊗ Petite Fleur, Tango, Unistats

Dynamic temperature control systems with the highest thermodynamics for stable and reproducible processes
